Test barrels are used to determine ballistics figures. Individual firearms may differ from these test barrel statistics.

SUPERIOR PERFORMANCE...

Whether you're a sportsman out for game, a target shooter looking for that perfect score, or a policeman whose life may be on the line, you'll appreciate the superior performance you get when you load S & W ammunition in your handgun. S & W brings out the best in whatever gun you choose to shoot.

These S & W cartridges are made with the same attention to quality that Smith & Wesson has shown in the manufacture of shooting products since 1852.

They're loaded with non-mercuric, non-corrosive primers, top quality smokeless powder, with popular bullet styles and carefully matched in one of the nation's best ballistic laboratories.

They have been designed with today's handgunners in mind. Try a box, you can't go wrong.
