**AM
180** 

A revolutionary firearm was developed which, combined with the Laser Lok sight and other accessories, constitutes the most advanced hand-held weapon system available today.

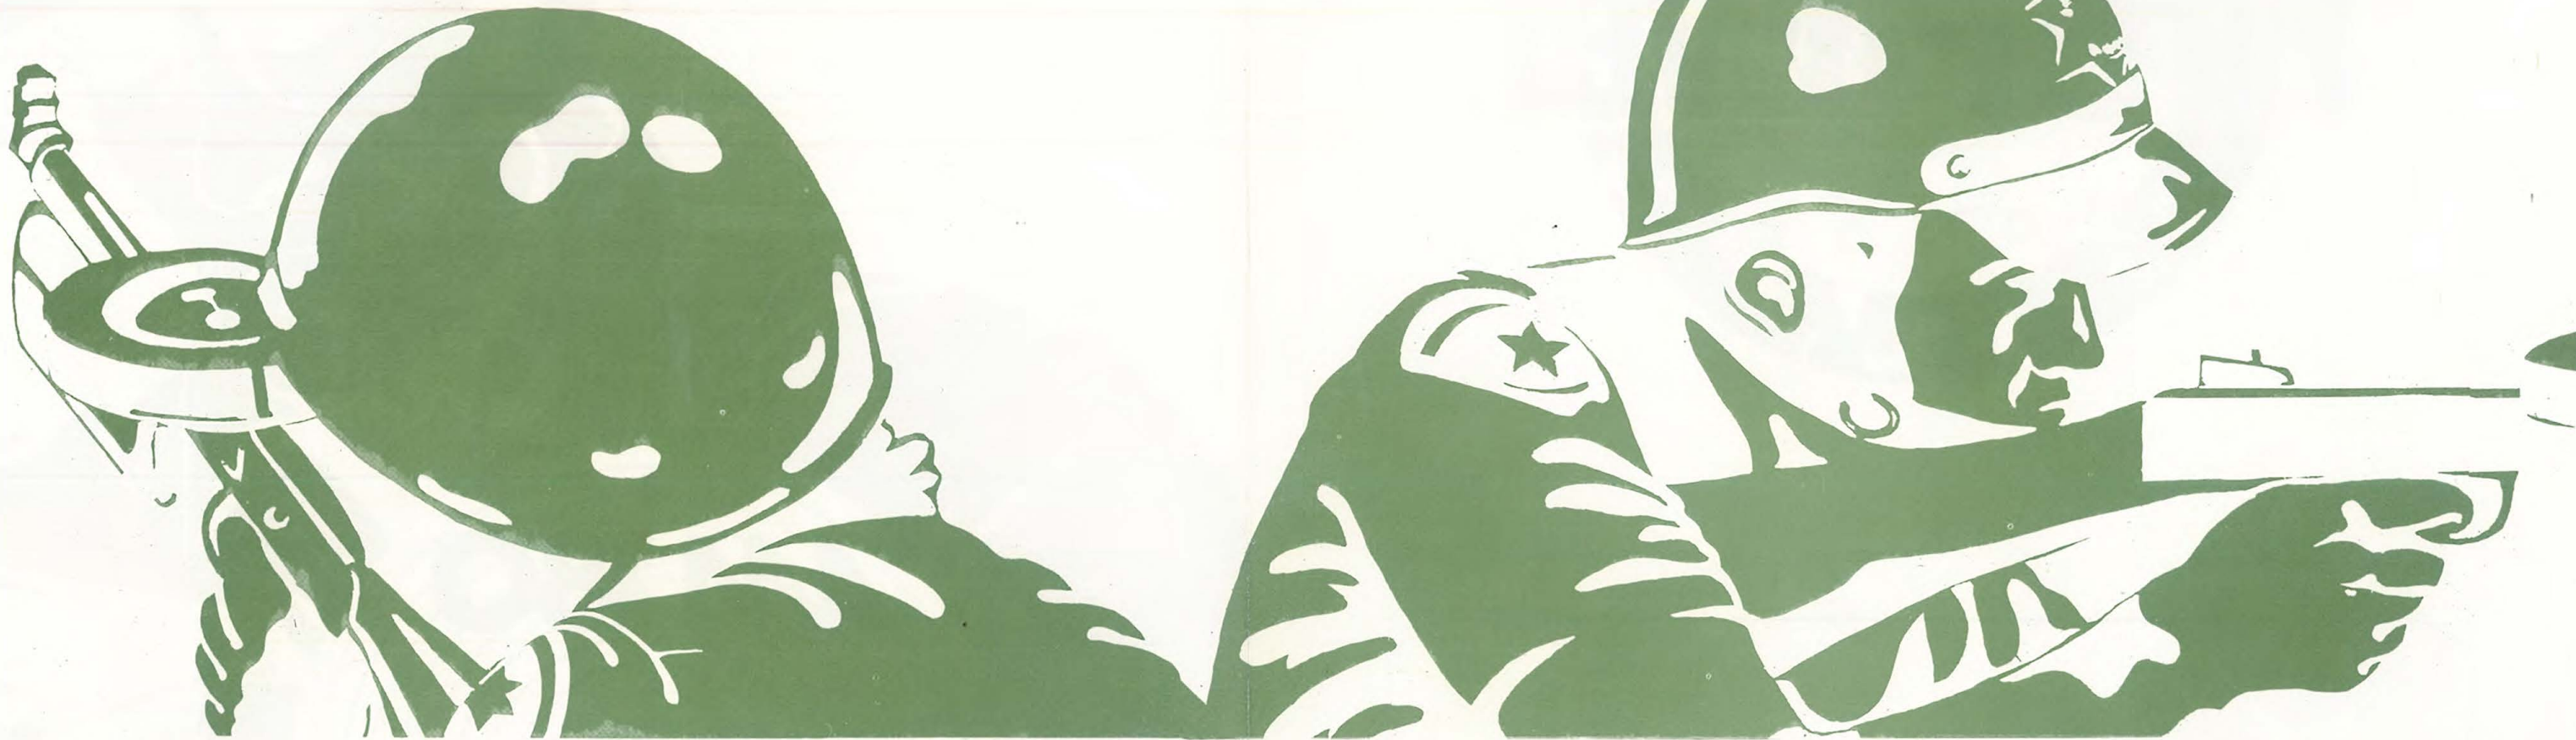

Utilizing the .22 Long Rifle cartridge, the firearm has no barrel climb or recoil, making it the most controllable automatic weapon in the world. The **AM180** rifle has a magazine capacity of 177 rounds and a cyclic rate of over 25 rounds per second. This gives the user tremendous flexibility with a weapon that offers both semi-automatic and full automatic modes of fire. The firepower can be varied from one round at a time to as much as 177 rounds in less than 7 seconds.

The **AM180** has been tested in every possible environment and has performed superbly. The assembly, disassembly, and maintenance are extremely simple due to the design and construction. The use of .22 Long Rifle ammunition makes the rifle very economical to operate, returning its cost several times over from using low cost ammunition and from the minimum maintenance required.

The Laser Lok sight provides an unequalled sighting capability during poor lighting conditions. Using a helium-neon laser, the Laser Lok sight projects a small red dot that shows the user the point at which the bullet will impact. This dramatically increases the effectiveness of this weapon system.

The **AM180** weapon system is the most versatile in existence. It offers the user the advantages of controllability, superb accuracy, and economy of operation. It offers accuracy to substantial distances without the disadvantages of excessive range inherent in larger caliber firearms.

The **AM180** weapon system is in use in several countries and by many law enforcement agencies. The weapon system is effective, and the response received from purchasers has been unanimously favorable.

RIFLE SPECIFICATIONS

Model	AM180
Caliber	.22 Long Rifle
Length, Overall	35 1/4" Standard 18" Short
Weight, Empty	5 1/2 lbs. Std. 4 1/2 lbs. Short
Weight, Loaded	Approx. 10 lbs. Standard 9 lbs. Short
